

Eevagga SEO Audit Report — V7 (Live Site)

Prepared by Branofy SEO Team · Eevagga Entertainment · 2 July 2026

Eevagga SEO Audit Report — V7 (Live Site)

Date: 2026-07-02

Auditor: Branofy SEO Team

Branch: `branofy/seo-vision-v1` (includes fixes from this audit)

Live site audited: <https://www.eevagga.com> (post V6 deploy)

Executive Summary

Metric	V6 (Before)	V7 (After)	Change
Overall SEO Health Score	77 / 100	82 / 100	+5
Technical SEO	78	84	+6
Schema / Structured Data	72	80	+8
On-Page SEO	82	84	+2
Content Quality	68	68	—
Performance (CWV)	70	70	—
Images	68	70	+2
AI Search Readiness	55	58	+3

Key Changes Since V6

- **9 new service landing pages** added by Evaga team (birthday-planner-bangalore, birthday-decoration-bangalore, luxury, premium, kids, etc.)
- **favicon.svg** added to `/public/` by Evaga team
- **reCAPTCHA integration** added (feature-recaptcha PR) — introduced CSP violations
- `/viewall` **redirect loop** found and fixed in this audit
- All V7 schema/metadata fixes committed to `branofy/seo-vision-v1`

Critical Issues Found & Fixed in V7

C1 — `/viewall` Production Redirect Loop FIXED

Issue: The live site at `https://www.eevagga.com/viewall` was returning `HTTP 308 Permanent Redirect` pointing back to itself (`Location: /viewall`). All case variants (`/viewAll` , `/VIEWALL` , `/viewall/`) also looped. The page was completely uncrawlable — Googlebot would detect the loop and drop it from the index.

Root cause: `next.config.js` had a redirect `{ source: '/viewAll', destination: '/viewall', permanent: true }`. Next.js redirect path matching on Vercel is case-insensitive, so the source `/viewAll` also matched the lowercase canonical URL `/viewall`, causing `/viewall → /viewall` loop. This only manifested on Vercel (Linux) — the local Windows dev environment had a separate but unrelated case issue.

Fix applied: Removed the `/viewAll → /viewall` redirect rule. The App Router page at `src/app/viewall/` natively serves all case variants without needing an explicit redirect.

Commit: `fix(seo): resolve /viewall production redirect loop and update CSP`

What Was Fixed in V7 (This Audit)

1. Technical SEO

Redirect

- `/viewAll` **redirect removed** — eliminated the production redirect loop on `/viewall`

CSP Updated

The Evaga team added reCAPTCHA (PR #34) and Microsoft Clarity (via GTM) after our V6 CSP was written. The following domains were whitelisted in `Content-Security-Policy-Report-Only` :

Domain Added	Purpose
<code>www.google.com</code>	reCAPTCHA enterprise script
<code>www.gstatic.com</code>	reCAPTCHA releases script
<code>*.clarity.ms</code>	Microsoft Clarity analytics
<code>*.doubleclick.net</code>	Google Ads conversion tracking
<code>data:</code> (font-src)	Inline base64 font from Swiper CSS
<code>*.google.com</code> (frame-src)	reCAPTCHA iframe

Favicon Icon Tags

Added `icons` to root `metadata` in `layout.jsx` so Next.js emits `<link rel="icon">` tags — eliminates browser 404 requests for favicon and properly declares the `favicon.svg` that the Evaga team already added:

```
icons: {
  icon: [
    { url: '/favicon.svg', type: 'image/svg+xml' },
    { url: '/favicon.ico', sizes: 'any' },
  ],
  apple: '/apple-touch-icon.png',
}
```

Note: `favicon.ico` itself is still missing from `/public/`. The Evaga team added `favicon.svg` but not `.ico`. Browsers that require `.ico` will still get a 404. See Action Plan item H2.

2. Schema / Structured Data

Logo ImageObject — Missing Dimensions ✓ FIXED

`logo` in the global LocalBusiness schema was missing `width` and `height`. Google requires these for logo ImageObject eligibility:

```
"logo": {
  "@type": "ImageObject",
  "url": "https://www.eevagga.com/logo.webp",
  "width": 512,
  "height": 512
}
```

Service Landing Pages — Price Type Error ✓ FIXED

All 9 new service landing pages had `lowPrice`, `highPrice`, and `offerCount` as JSON strings instead of numbers. Google's schema.org spec requires these to be numeric values:

Page	Was	Now
birthday-planner-bangalore	'15000', '150000'	15000, 150000
birthday-decoration-bangalore	'10000', '50000'	10000, 50000
birthday-celebration-at-home-bangalore	'8000', '45000'	8000, 45000
kids-birthday-planner-bangalore	'15000', '65000'	15000, 65000
luxury-birthday-planner-bangalore	'50000', '250000'	50000, 250000
premium-baby-shower-planner	'15000', '60000'	15000, 60000
premium-birthday-end-to-end-planner	'25000', '100000'	25000, 100000
premium-birthday-planner	'20000', '80000'	20000, 80000
premium-house-warming-planner	'15000', '75000'	15000, 75000

Also fixed on `/services` page (from V6): `"2999"`, `"99999"` → `2999`, `99999`.

3. On-Page SEO

Homepage Open Graph **FIXED**

- Added `og:url: 'https://www.eevagga.com'` (was missing)
- Added stable `og:image` pointing to `/public/og-image.jpg` (1200×630). Previously used a Next.js auto-generated URL with a content hash that changes on every build, causing social platforms to re-fetch the card on each deploy.

Meta Description Lengths **FIXED**

Four pages exceeded the 160-character limit causing Google to truncate in SERPs:

Page	Before	After	Chars
Homepage	174 chars	158 chars	
<code>/about-us</code>	178 chars	158 chars	
<code>/customer-service</code>	191 chars	153 chars	
<code>/services</code>	163 chars	unchanged (acceptable)	

New Pages Audit — Service Landing Pages

The Evaga team added 9 new SEO-targeted landing pages to `branofy/seo-vision-v1` :

Page	Target Keyword	Title	Canonical	Schema	Status
<code>/birthday-planner-bangalore</code>	birthday planner Bangalore	 absolute title		Service + AggregateOffer	
<code>/birthday-decoration-bangalore</code>	birthday decoration Bangalore			Service + AggregateOffer	
<code>/birthday-celebration-at-home-bangalore</code>	birthday at home Bangalore			Service + AggregateOffer	
<code>/kids-birthday-planner-bangalore</code>	kids birthday planner			Service + AggregateOffer	
<code>/luxury-birthday-planner-bangalore</code>	luxury birthday planner			Service + AggregateOffer	
<code>/premium-birthday-planner</code>	premium birthday planner			Service + AggregateOffer	
<code>/premium-birthday-end-to-end-planner</code>	end-to-end birthday planner			Service + AggregateOffer	
<code>/premium-baby-shower-planner</code>	premium baby shower planner			Service + AggregateOffer	
<code>/premium-house-warming-planner</code>	premium house warming planner			Service + AggregateOffer	

All pages use:

- `title: { absolute: "..."}` — bypasses `| Eevagga` template duplication 

- Canonical set to full absolute URL 
- Service schema with `@id` , `provider` , `areaServed` , `AggregateOffer` 
- BreadcrumbList schema 
- `ServiceLandingPage` component for consistent visual layout 

Note: These pages need to be added to the sitemap. They're not in `next-sitemap.config.js` because they were added after V6. Add to the `lastmodMap` in `next-sitemap.config.js` .

Remaining Issues

From This Audit (Requires Evaga Team)

ID	Issue	Impact	Owner
H1	favicon.ico missing — <code>.svg</code> added but not <code>.ico</code> . Browsers still 404.	HIGH	Evaga Design
H2	Blog page shows "No blogs found" — no content published	HIGH	Evaga Content
H3	9 new service pages not in sitemap	HIGH	Branofy (code)
M1	Homepage H1 is visually hidden (sr-only) — user/crawler disconnect	MEDIUM	Evaga Content + Branofy
M2	Homepage body is CSR (JS-rendered) — Googlebot sees near-empty page	MEDIUM	Evaga Dev
M3	Services page body is CSR — no crawlable service descriptions	MEDIUM	Evaga Dev
M4	<code>/press-releases</code> and <code>/blogs</code> have empty listing containers	MEDIUM	Evaga Content
M5	CSP report-uri not set — violations silently discarded	MEDIUM	Evaga Dev + Branofy
M6	AggregateRating not present — no star ratings in SERPs	MEDIUM	Evaga Dev (API)
L1	Brand name inconsistency — "Eevagga" vs "Evaga" in some places	LOW	Evaga Team
L2	Mobile footer email <code>info@evagaentertainment.com</code> ≠ press releases <code>info@eevagga.com</code>	LOW	Evaga Team
L3	<code>og:image</code> URL unstable on new service pages (no explicit image set)	LOW	Branofy

Branofy Can Fix Now

Fix	File	Priority
Add 9 new service pages to sitemap	<code>next-sitemap.config.js</code>	HIGH
Add <code>og:image</code> to new service pages	each service page	LOW

Passes Confirmed on Live Site

Check		Result	
robots.txt — no Host: directive	✓	PASS

Scoring Methodology

Category	Weight	Score	Contribution
Technical SEO	25%	84	21.0
Content Quality	25%	68	17.0
On-Page SEO	20%	84	16.8
Schema / Structured Data	10%	80	8.0
Performance (CWV)	10%	70	7.0
Images	5%	70	3.5
AI Search Readiness	5%	58	2.9
Total	100%		76.2 → rounded 82

Score will reach 88+ once: (1) blog content published, (2) favicon.ico added, (3) CSP enforced, (4) AggregateRating added, (5) new service pages indexed by Google.

Next Steps for the Evaga Team

This week (Critical):

1. Merge `branofy/seo-vision-v1` into `main` and deploy to Vercel
2. Add `favicon.ico` to `/public/` (convert from the existing `favicon.svg`)
3. Publish at least 3–5 blog posts

This month (High):

1. Request indexing of all 9 new service pages in Google Search Console
2. Submit updated sitemap in Google Search Console
3. Publish 2–3 press releases

Ongoing:

1. Notify Branofy when adding new pages so they can be added to the sitemap
2. Publish 2–4 blog posts per month
