

Eevagga — Full On-Page SEO Execution Plan

Prepared by: Branofy SEO Team **Date:** 2026-07-13 **Version:** 1.0 **For:** Eevagga Dev + Content Team

What Is On-Page SEO?

On-page SEO is everything on your own website that affects how Google ranks and displays your pages — titles, headings, body content, internal links, images, page speed, and structured data. Unlike off-page SEO (backlinks, PR), on-page is 100% within your control.

Why it matters for Eevagga: Your technical foundation is strong (88/100). Your on-page layer is holding the overall score at 75/100. Fixing the items in this plan can push the site to 90+/100 and directly improve rankings for high-intent keywords like "birthday planner Bangalore."

Overall Status

Part 1 — Fix H1 Tags (All Pages)

The Problem

Six of seven main pages have H1 tags that are visually hidden from users using CSS:

```
``css
position: absolute; width: 1px; height: 1px; clip: rect(0,0,0,0);
`
```

Google sees the H1 but users don't. Per Google's Quality Rater Guidelines, content visible to crawlers but hidden from users is a quality concern. More practically: users see no clear headline when they land on a page, hurting engagement and trust.

What Needs to Change

The visual hero heading on each page (the big text users actually see) should be wrapped in a

tag. The hidden

in the Next.js page.jsx file should then be removed.

Page-by-Page H1 Fix Plan

Current situation:

- Hidden H1 in `src/app/page.jsx` : "Birthday Planner in Bangalore – House Warming & Baby Shower Celebrations | Eevagga"

- Visual hero heading in **HomePage** component (CSR): unknown tag

Target H1 (visible, in hero):

\

Birthday Planner in Bangalore

\

This is the keyword-first phrase that users and Google should both see immediately.

Action (Evaga Dev):

- In `src/pages/HomePage.jsx` (or the hero component), find the main hero heading

- Change its HTML tag from

,

, or

to

- In **src/app/page.jsx** , remove the

line

Owner: Evaga Dev Effort: 30 minutes Impact: HIGH – homepage H1 is a major ranking signal for "birthday planner bangalore"

Page 2 – Services (/services)

Current H1 (hidden): "Birthday & Celebration Services in Bangalore – Eevagga" Target H1

(visible, in hero):

Birthday & Celebration Services in Bangalore

Action (Evaga Dev):

- In **src/pages/OurService.jsx** , find the top heading of the services page

- Change it to

- Remove hidden H1 from **src/app/services/page.jsx**

Owner: Evaga Dev Effort: 30 minutes Impact: HIGH

Page 3 – Blogs (/blogs)

Current H1 (hidden): "Eevagga Blog – Birthday & Celebration Ideas, Themes & Planning Guides"

Target H1 (visible):

Birthday & Celebration Blog

Action (Evaga Dev):

- In **src/pages/Blog.jsx**, make the page title heading an

- Remove hidden H1 from **src/app/blogs/page.jsx**

Owner: Evaga Dev Effort: 30 minutes

Page 4 – View All Packages (/viewall)

Current H1 (hidden): "Birthday & Celebration Packages in Bangalore – Browse & Book | Eevagga"

Target H1 (visible):

Birthday & Celebration Packages in Bangalore

Action (Evaga Dev):

- In the viewall page component, make the listing page heading an

- Remove hidden H1 from **src/app/viewall/page.jsx**

Owner: Evaga Dev Effort: 30 minutes

Page 5 – Customer Service (/customer-service)

Current H1 (hidden): "Customer Service – Eevagga Support & Help" Target H1 (visible):

Customer Service – Eevagga Support

Action (Evaga Dev):

- In **src/pages/CustomerService.jsx** , make the page heading an

- Remove hidden H1 from **src/app/customer-service/page.jsx**

Owner: Evaga Dev Effort: 30 minutes

Page 6 – Birthday Planner Bangalore (/birthday-planner-bangalore) 🚨 MOST URGENT

This is the only page with NO H1 tag at all – not even a hidden one.

This is the most commercially valuable page on the site (targets "birthday planner bangalore" – high buyer intent keyword). No H1 means Google has no strong signal for what this page is about.

Target H1 (visible, in hero):

Birthday Planner in Bangalore

Action (Branofy + Evaga Dev):

- In the **ServiceLandingPage** component
(`src/components/ServiceLandingPage/ServiceLandingPage.jsx`),

find the main hero heading

- Change it to

(or add a visible

if no heading exists in the hero)

- All 9 service landing pages use this same component – one fix covers all of them

Owner: Evaga Dev (with Branofy guidance) Effort: 45 minutes (covers all 9 service pages)

Impact: CRITICAL

Part 2 – Enable Server-Side Rendering for Key Pages

The Problem

The 4 most important pages deliver only ~110-130 words to Googlebot in server-rendered HTML.

All body content – service descriptions, package listings, hero copy, testimonials – is loaded

via JavaScript after the page loads. Google does execute JavaScript, but:

- JS-rendered content is discovered and indexed more slowly (days to weeks delay)
- Core body content that explains what the page offers isn't in the initial HTML
- Internal links inside JS-rendered sections (package cards, CTAs) aren't discovered through link crawling

What Needs to Change

The main content sections of these pages need to render their essential text server-side. This doesn't mean rebuilding the whole page – just the key text content.

Minimum SSR Content Required Per Page

Homepage (/)

Current SSR words: ~110 (nav + footer only) Minimum needed: 300 words SSR What to add to SSR

(in **src/app/page.jsx** or a new Server Component):

`jsx`

// Add this server-rendered section ABOVE the Suspense boundary

Birthday Planner in Bangalore

Eevagga is Bangalore's premium full-service birthday planning company.

We handle end-to-end birthday celebrations – theme decoration, photography, venue coordination, entertainment, and on-ground execution. 500+ events delivered across Bangalore.

Services: Birthday planning · House warming · Baby shower · Kids parties ·

Luxury celebrations · Premium end-to-end planning

Owner: Evaga Dev Effort: 2 hours

Services (/services)

Current SSR words: ~119 Minimum needed: 400 words SSR What to add:

- A server-rendered list of service types with brief descriptions
 - Package price range (₹2,999 - ₹99,999)
 - Service area (Bangalore)
 - At least 3-4 service category names as headings or list items
-

View All Packages (/viewall)

Current SSR words: ~130 Minimum needed: 300 words SSR What to add:

- Static list of package category names (Birthday, House Warming, Baby Shower, etc.)
 - Brief description of what "browse packages" means
 - Static price range text
-

Birthday Planner Bangalore (/birthday-planner-bangalore)

Current SSR words: ~112 Minimum needed: 600 words SSR This page must be the priority. It

targets the most competitive and valuable keyword. The **ServiceLandingPage**

component should render its core content server-side:

- Service description (2-3 paragraphs)
- What is included (bullet list)
- Price range
- Areas served in Bangalore (Koramangala, Indiranagar, Whitefield, etc.)
- Brief FAQ (2-3 questions)

Owner: Evaga Dev Effort: 4-6 hours per page (architecture change) Impact: Very high – directly

affects keyword ranking

Part 3 – Internal Linking Strategy

Current State

After our nav and footer fix (commit **9946d8e**), the internal linking structure is

significantly improved. But there are still gaps.

Link Equity Flow (Target)

Homepage (highest authority)

- |
- ├ /services
- ├ /viewall ← (now linked from nav + footer)
- ├ /about-us
- ├ /blogs
- └ /customer-service
- |
- └ /birthday-planner-bangalore ← (now in footer)
- └ /birthday-decoration-bangalore
- └ /kids-birthday-planner-bangalore
- └ /luxury-birthday-planner-bangalore
- └ /premium-birthday-planner
- └ /premium-house-warming-planner
- └ /premium-baby-shower-planner

Additional Links to Add

Owner: Evaga Dev + Content Team **Effort:** 2-3 hours across pages **Impact:** HIGH – distributes homepage authority to money pages

Part 4 – Blog Content Plan (Topical Authority)

Why Blog Content Is Critical

Currently Evagga has **zero published blog posts**. This means:

- No long-tail keyword coverage ("how to plan a birthday party at home in Bangalore")
- No topical authority signals for Google
- No content for Google's AI Overviews to cite
- No reason for users to visit the site except to book directly

Content Strategy: Topical Clusters

Build content in clusters. Each cluster has a main "pillar" page and several supporting blog posts.

Cluster 1: Birthday Planning (Target: "birthday planner bangalore")

Pillar: /birthday-planner-bangalore (already live) **Supporting blog posts (publish in order):**

- "How to Plan a Birthday Party in Bangalore: Complete 2026 Guide" – 2,000 words
- "10 Best Birthday Decoration Ideas for Adults in Bangalore" – 1,500 words
- "Birthday Themes for Kids in Bangalore: 15 Creative Ideas" – 1,500 words
- "How Much Does a Birthday Planner Cost in Bangalore?" – 1,000 words
- "Birthday Party Venues in Bangalore: Top 10 for 2026" – 1,500 words

Cluster 2: House Warming (Target: "house warming planner Bangalore")

Pillar: /premium-house-warming-planner (already live) **Supporting blog posts:**

- "Griha Pravesh Puja Decoration Ideas in Bangalore" – 1,500 words
- "House Warming Party Planning Guide for Bangalore Homes" – 2,000 words
- "Traditional vs Modern House Warming Themes: What's Popular in Bangalore" – 1,200 words

Cluster 3: Baby Shower (Target: "baby shower planner Bangalore")

Pillar: /premium-baby-shower-planner (already live) **Supporting blog posts:**

- "Baby Shower Themes for 2026: Ideas for Bangalore Celebrations" – 1,500 words
- "How to Plan a Baby Shower in Bangalore: Budget Guide" – 1,200 words
- "Baby Shower Decoration Ideas: Trending Themes in India" – 1,200 words

Blog Publishing Schedule

Owner: Evaga Content Team **Effort:** 3-5 hours per post (writing + editing + images) **Impact:** Long-tail traffic in 3-6 months; topical authority in 6-12 months

Part 5 – Meta Tag Cleanup (Remaining Pages)

Most meta issues were fixed in our V8 commit. These are the remaining ones that need Evaga's attention:

Pages with No **og:image** Set Explicitly

The 9 service landing pages inherit the default `og:image` from `layout.jsx`. This is fine as a fallback, but for best social sharing appearance each page should have a relevant hero image as its OG image.

Recommendation: Add `images: [{ url: 'https://www.eevagga.com/og-[page-slug].jpg', width: 1200, height: 630 }]` to each service page's metadata. Create OG images for each page (Canva or existing photography).

Owner: Evaga Design + Branofy **Effort:** 2 hours (creating images) + 30 min (code)

About Us — Add CTA to Meta Description

Current: "Eevagga is Bangalore's most trusted birthday, house warming and baby shower planning company. Premium execution, creative themes and end-to-end planning."

No call to action. Users don't know what to do.

Recommended: "Eevagga is Bangalore's most trusted birthday & celebration planning company. Premium execution, creative themes and end-to-end planning. Meet our team." **Owner:** Branofy

Effort: 5 minutes

Part 6 — Schema Markup Remaining Opportunities

S1 — AggregateRating on Service Landing Pages

Currently only the global `LocalBusiness` schema has the aggregate rating. Individual service pages could also carry it to appear as rich results for that specific service.

```
`json
{
  "@type": "AggregateRating",
  "ratingValue": 4.8,
  "reviewCount": 500,
  "bestRating": 5,
  "worstRating": 1
}
```

Add this to the `Service` schema on each of the 9 service landing pages.

Owner: Branofy **Effort:** 1 hour (batch update)

S2 — FAQ Schema on Customer Service Page

The `/customer-service` page has an H2 "Frequently Asked Support Questions" with a list of FAQs below it. These should use `FAQPage` schema to potentially show as rich results:

```
`json
{
  "@context": "https://schema.org",
```

```

"@type": "FAQPage",

"mainEntity": [

{

"@type": "Question",

"name": "How do I book a package?",

"acceptedAnswer": { "@type": "Answer", "text": "..." }

}

]

}

`

```

Note: As of August 2023, Google restricted FAQ rich results to government and healthcare sites. However, the schema itself is still valid and may appear in AI Overviews. **Owner:** Branofy **Effort:** 1 hour

S3 – BlogPosting Schema on Individual Blog Posts

When blog posts are published, each post page should include:

```

`
json

{

"@type": "BlogPosting",

"headline": "...",

"datePublished": "...",

"dateModified": "...",

"author": { "@type": "Organization", "@id": "https://www.eevagga.com/#organization" },

"publisher": { "@id": "https://www.eevagga.com/#organization" },

"image": { "@type": "ImageObject", "url": "...", "width": 1200, "height": 630 }

}

`

```

Owner: Branofy (when Evaga team publishes blog content)

S4 – BreadcrumbList on Homepage

A single-item breadcrumb on the homepage is valid schema:

```

`
json

{ "itemListElement": [{ "position": 1, "name": "Home", "item": "https://www.eevagga.com" }] }

`

```

Owner: Branofy **Effort:** 10 minutes

Part 7 – Image Optimisation

Current State

1

Images are loaded from CloudFront (`d3a9w2e6vszgj1.cloudfront.net`) – this is good for performance. However, image SEO requires alt text and proper sizing.

Actions Required

Impact: Images with proper alt text appear in Google Images search – an additional traffic channel.

Part 8 – AI Search Readiness

Why This Matters

Google's AI Overviews (formerly SGE) and tools like ChatGPT, Perplexity, and Claude pull answers from trusted, well-structured web pages. Eevagga currently scores 35/100 on AI citation readiness. Higher scores mean Eevagga appears in AI-generated answers to questions like "who is the best birthday planner in Bangalore?"

Actions to Improve AI Visibility

1

Part 9 – Performance & Core Web Vitals

Current Score: 70/100

Core Web Vitals (LCP, INP, CLS) directly affect Google rankings.

Quick Wins

- **Preload hero image:** Add `in` in `layout.jsx`
- **Lazy load below-fold images:** Add `loading="lazy"` to gallery and testimonial images
- **Defer non-critical scripts:** GTM and FB Pixel already use `strategy="afterInteractive"` 
- **Set image dimensions:** Add `width` and `height` to all `img` tags to prevent CLS

Owner: Evaga Dev **Effort:** 2-3 hours

Execution Roadmap

Phase 1 – Quick Wins (Week 1-2)

Branofy actions:

- [] Add `BreadcrumbList` to homepage
- [] Add `AggregateRating` to 9 service landing pages

- ☐ Add FAQ schema to customer-service page
- ☐ Fix About Us meta description CTA

- ☐ Add `og:image` to service pages

Evaga Dev actions:

- ☐ Fix H1 on `/birthday-planner-bangalore` (`ServiceLandingPage` component)
- ☐ Remove hidden H1 from all pages where visual H1 is added
- ☐ Add `/viewall` and `/birthday-planner-bangalore` to body of homepage (text links)
- ☐ Set `width / height` on all ``` tags (CLS fix)

Evaga Content:

- ☐ Write and publish 2 birthday planning blog posts

Timeline: 2 weeks **Projected score increase:** 75 → 82

Phase 2 — Architecture Fixes (Month 1–2)

Evaga Dev actions:

- ☐ Make homepage hero section server-side rendered (SSR)
- ☐ Make services page content SSR
- ☐ Make `/viewall` package listings SSR (at least category names)
- ☐ Fix blog API so it returns posts during SSR
- ☐ Debug and fix H1 visibility across all pages (design coordination needed)

Evaga Content:

- ☐ Publish 6 more blog posts (total 8)
- ☐ Publish 2 press releases

Timeline: 1–2 months **Projected score increase:** 82 → 88

Phase 3 — Authority Building (Month 2–4)

All teams:

- ☐ 3–4 blog posts per month ongoing
- ☐ Add team/author profiles to About page (E-E-A-T)
- ☐ Collect and display customer reviews (Google Reviews widget)
- ☐ Enable CSP enforcement (remove -Report-Only)
- ☐ Submit updated sitemap to Google Search Console monthly
- ☐ Request indexing of new pages via Google Search Console

Timeline: 2–4 months **Projected score increase:** 88 → 93+

Contacts & Responsibilities

Success Metrics

Track these monthly in Google Search Console:

Layer	Current Score	Target	Gap
Technical SEO	90/100	95/100	Middleware fix (done)
Schema / Structured Data	87/100	92/100	Minor additions
On-Page SEO	80/100	92/100	Titles, H1s, meta
Content Quality	40/100	75/100	SSR + blog content
AI Search Readiness	35/100	65/100	SSR + FAQ schema
Overall	75/100	90/100	This plan
From Page	To Page	Link Text	Where to Add
-----	-----	-----	-----
/services body	/birthday-planner-bangalore	"Birthday Planner in Bangalore"	In service list
/services body	/viewall	"Browse all packages"	CTA button
