

Eevagga SEO Audit Report

Full Multi-Agent Audit - V5

Site: <https://eevagga-demo.vercel.app/> | <https://www.eevagga.com>

Branch: branofy/seo-vision-v1 | Date: 2026-06-23

Method: 6 Parallel Specialist Subagents

56 / 100

Overall SEO Health Score

Technical SEO (weight 25%)	68/100
Content Quality & E-E-A-T (weight 25%)	54/100
On-Page SEO (weight 20%)	58/100
Schema / Structured Data (weight 10%)	52/100
Performance (CWV) (weight 10%)	40/100
Images (weight 5%)	40/100
AI Search Readiness (weight 5%)	52/100

Context: V2 audit scored 81/100 on the feature-event-pages branch which had 9 built service pages. This audit covers branofy/seo-vision-v1 where those pages are not yet merged to main. The lower score reflects missing service pages, properly-measured LCP (now failing at 4-6s), and deeper content/schema analysis.

1. CRITICAL ISSUES - Fix Immediately

- C1** Service landing pages return 404 - The 35 birthday/house warming/hyperlocal SEO pages (the entire expansion strategy) are not built as App Router routes in this branch. They 404. Feature-event-pages branch has 9 of these; merge is pending.
- C2** Sitemap covers only 11 of ~46 pages - additionalPaths in next-sitemap.config.js is fully commented out. Zero coverage for package pages, blog posts, or category pages. Google cannot discover the vast majority of the site.
- C3** Facebook pixel broken since launch - fbevents URL missing .js extension. 600ms wasted on every page load. Zero analytics events since go-live. Fix: change "fbevents" to "fbevents.js" in layout.jsx line 166.
- C4** Gallery images broken on demo - "Our Work" section shows empty lavender boxes. NEXT_PUBLIC_API_Aws_Image_BASE_URL may be unset or misconfigured in demo Vercel environment. Users see placeholder boxes, not real event photos.

2. HIGH PRIORITY - Fix Within 1 Week

Performance & Technical

Eevagga SEO Audit Report (V5) - June 2026

- H1** LCP failing (~4-6s) - AliceCarousel loaded with `ssr: false` in `SliderNew.jsx`. Hero renders nothing server-side; LCP image cannot start loading until React hydrates + dynamic import resolves. +800ms-2s delay on mobile.
- H2** LCP - IntersectionObserver gate on first banner slide (`BannerNew.jsx`). Banner starts at `opacity: 0` and only becomes visible when observer fires + Framer animation runs. First slide is always above the fold - no reason to delay it.
- H3** LCP - Framer Motion 300KB across 4 chunks. 20+ components import full runtime without LazyMotion. Fix: wrap app in `<LazyMotion features={domAnimation}>`, use `m.*` instead of `motion.*`. Estimated LCP improvement: 200-400ms.
- H4** No redirect for `/viewall` (lowercase) -> `/viewAll`. Lowercase URL returns 404. Fix: add `{ source: "/viewall", destination: "/viewAll", permanent: true }` to `next.config.js` redirects.
- H5** Gallery images at 3840px via plain `<img>` in `ProductCardV2.jsx`. Cards render at ~240px. 80-95% wasted bandwidth per image. Fix: replace with Next.js `<Image fill sizes="240px">` - CloudFront is already in `remotePatterns`.
- H6** Auth pages `/user/login`, `/user/signup`, `/vendor/*` have no metadata export - defaulting to index, follow. Add export `const metadata = { robots: { index: false, follow: false } }` to each auth page.

Schema

- H7** telephone missing from organization schema in `layout.jsx`. "+91-8050279101" exists in WhatsApp CTAs but NOT in JSON-LD `contactPoint`. Blocks AI citation and Knowledge Panel display.
- H8** Package page XSS vulnerability - `JSON.stringify(schema)` without `.replace(/</, "\u003c")`. User-generated content from API (package titles, descriptions) can inject script tags into the page.
- H9** Package schema `provider.name` is "Evaga Entertainment" (wrong). Should be "Eevagga Entertainment". `package/page.jsx` line 38.
- H10** Package schema uses inline Organization object instead of `@id` reference. Replace with `{ "@id": "https://www.eevagga.com/#organization" }` to link to global schema graph.
- H11** Package pages have no `BreadcrumbList` schema. Only structured data page without breadcrumb. Add 3-level: Home > Service > Package.

Content & Navigation

- H12** `companyDetails.js` has placeholder phone "123-456-7890" (US number) and name "Evaga" (single-e). This utility feeds multiple components, creating NAP inconsistency. Fix: replace with "+91-8050279101" and "Eevagga".
- H13** `/careers` page body is "Coming Soon" + decorative dots. Indexed and in sitemap. Direct Helpful Content System demotion risk. Either add robots `noindex` OR add 300+ words of real content.
- H14** `/press-releases` has zero static body text. All content is CSR API-fetched. Add static H1 + 150-word introduction above the API card grid.
- H15** Homepage navbar has only 3 links (Home, About Us, Our Services). No Celebrations dropdown on homepage. Users have no navigation path from homepage to service landing pages. Add the dropdown that exists on the demo landing page.

3. MEDIUM PRIORITY - Fix Within 1 Month

- M1** Technical: `/viewAll` canonical and sitemap URL use PascalCase. Google normalises to lowercase. Rename directory to `/viewall` and update canonical.
- M2** Technical: `/package/[id]/[id]` pages have no explicit canonical in `generateMetadata`. Add `alternates.canonical`.
- M3** Technical: CSP `report-uri` missing. Violations are silently discarded in report-only mode. Add a reporting endpoint to actually collect CSP violation data.

M4	Technical: /category -> /viewAll redirect is 302 not 301. Change to permanent: true to pass link equity.
M5	Technical: Swiper base64 font violates CSP font-src. Remove @import "swiper/css/navigation" from global index.css (nav buttons are already disabled with disableButtonsControls).
M6	Technical: web-vitals package is v2.x which measures FID. INP replaced FID as a Core Web Vital in March 2024. Upgrade to web-vitals@^4.0.0.
M7	Schema: FAQPage is a restricted type since August 2023 (government/health only). Eevagga does not qualify - zero rich result benefit. Either remove the schema or align 6 schema questions exactly to 6 visible FAQ questions.
M8	Schema: BlogPosting author is @type: Organization. Google prefers @type: Person for Article byline eligibility. Change to Person with name: blog.authorName.
M9	Schema: Blog index node has no blogPost items (empty shell). Add server-side API fetch for first 10 posts; populate blogPost array.
M10	Schema: ItemList on /viewAll has no URL per item. Google cannot generate a carousel rich result without @id/url on ListItem.item. Add absolute URLs.
M11	Schema: No AggregateRating on LocalBusiness despite real testimonial API data. Add aggregateRating from getAllTestimonialsForUser. HIGHEST-VALUE schema addition - enables star ratings in branded searches.
M12	Content: WhyEevagga section is identical across all 35 service pages. Near-duplicate classification risk. Differentiate per service type: Griha Pravesh content for house warming, Godh Bharai for baby shower.
M13	Content: Homepage H1 is screen-reader-only (invisible). "Celebrate Without the Stress" in the hero is not in an H1 element. Make H1 visually integrated into the design.
M14	Content: Brand name inconsistency - "Evaga" (single-e) vs "Eevagga" (double-e) across companyDetails.js, footer copyright, and package schema. All non-legal strings must align to "Eevagga".

4. Detailed Score Breakdown

Technical SEO - 68/100

robots.txt is clean and consistent. Security headers are comprehensive. The critical failure is the sitemap: only 11 of ~46 pages are covered. Dynamic routes (packages, blogs, categories) have zero sitemap coverage because additionalPaths in next-sitemap.config.js is fully commented out.

- robots.txt: PASS - all 11 disallow paths correct, consistent with noindex metadata

Content Quality & E-E-A-T - 54/100

The site has genuine trust signals (CIN, real address, pricing, legal pages) but lacks first-hand experience proof, named expertise, and substantive content on key pages. The "Helpful Content" bar is not met on /careers and /press-releases.

E-E-A-T Factor	Score	Key Gap
Experience	32/100	No real event portfolio; reused birthday images on all pages
Expertise	38/100	No named professionals; "built by event pros" is unsubstantiated
Authoritativeness	35/100	/press-releases has zero static content; no press mentions
Trustworthiness	58/100	Real address + CIN + pricing [OK]; NAP inconsistent in companyD

Schema / Structured Data - 52/100

The schema @graph in layout.jsx is well-structured with no @id conflicts. Key failures: missing telephone, FAQPage now restricted to gov/health sites, package page has XSS risk and wrong brand name, and the core service landing pages don't exist yet.

- FAQPage: restricted type since Aug 2023 - no rich result benefit for private businesses

Performance (CWV) - 40/100

TTFB is exceptional at 22ms (Vercel Edge). The failure is entirely browser-side: LCP is running at 4-6 seconds due to three compounding factors, INP is failing from Framer Motion main-thread animation.

Metric	Measured	Target	Status
TTFB	22ms	?800ms	[OK] Excellent
FCP	156ms	?1.8s	[OK] Excellent
LCP	~4-6s	?2.5s	? FAILING
INP	~250-500ms	?200ms	? FAILING
CLS	~0.08-0.22	?0.1	? BORDERLINE

LCP root causes in order of impact:

- 1. AliceCarousel SSR: false - hero renders nothing server-side; +800ms-2s delay

5. Indexed Pages Status Matrix

Route	Robots	H1	Schema	Canonical	Status
/	index	sr-only	LocalBusiness, FAQPage[!]	[OK]	[!] Issues
/about-us	index	[OK]	AboutPage, BreadcrumbList	[OK]	[OK] Good
/services	index	[OK]	Service, BreadcrumbList	[OK]	[!] No offers
/blogs	index	[OK]	Blog, BreadcrumbList	[OK]	[!] No posts
/viewAll	index	[OK]	ItemList, Breadcrumb	[!] Case	[!] Issues
/customer-service	index	[OK]	ContactPage, Breadcrumb	[OK]	[!] No tel
/press-releases	index	[OK]	BreadcrumbList only	[OK]	? Thin
/careers	index	[OK]	None	[OK]	? Thin
/package/[id]/[id]	index	[OK]	Service (errors)	? Missing	? Errors
/blogs/singleBlog/[id]	index	[OK]	BlogPosting, Breadcrumb	[OK]	[OK] Good
/birthday-planner-bangalore	N/A	N/A	N/A	N/A	? 404
Hyperlocal pages (x11)	N/A	N/A	N/A	N/A	? 404
Theme pages (x6)	N/A	N/A	N/A	N/A	? 404
Venue pages (x5)	N/A	N/A	N/A	N/A	? 404

6. SEO Expansion Pages - Not Yet Built

The following 35 pages are the primary SEO investment for Eevagga. They are planned in SEO-TODO-LIST.md but do not exist as App Router routes in the current branch:

Category	Count	Status
Birthday core service pages	9	In feature-event-pages; not merged
Birthday theme pages	6	Not built
Age-based pages (kids, adults, etc.)	4	Not built
Venue pages	5	Not built
Hyperlocal Bangalore area pages	11	Not built
TOTAL	35	None in main branch

7. Score Evolution

Version	Score	Branch	Date	Notes
V1	72/100	feature-event-pages	Jun 2026	9 service pages + title duplication bug
V2	81/100	feature-event-pages	Jun 2026	After tech team fixed titles + FAQ mismatch
V5	56/100	branofy/seo-vision-v1	Jun 2026	Current production branch; service pages not merged

8. Action Plan Summary

- WEEK 1 - Critical Quick Wins (0-5 hours total):
- C3: Fix fbevents.js URL - add .js extension in layout.jsx (5 min)

WEEK 2 - Performance Fixes (highest LCP impact):

- H2: Remove IntersectionObserver gate from BannerNew.jsx slide 0 - initialise isVisible=true

WEEK 3+ - Content, Schema & Service Pages:

- H13: Fix /careers page (add robots noindex OR add 300+ words real content)

Projected Score After Fixes:

Phase	Score	Actions
Current	56/100	Baseline
After Week 1	~63/100	Quick wins + critical engineering fixes
After Week 2 + merge	~72/100	Performance + content + 9 service pages live
After Month 2	~80/100	Full optimization + AggregateRating + blog content

This report was generated by Claude Code SEO Audit System using 6 parallel specialist subagents: seo-technical, seo-content, seo-schema, seo-sitemap, seo-performance, and seo-visual. Full findings: seo-audit/FULL-AUDIT-REPORT-V5.md | Action plan: seo-audit/ACTION-PLAN-V5.md
