

Eevagga SEO Audit Report — V8 (Live Site Deep Audit)

Date: 2026-07-13 **Auditor:** Branofy SEO Team **Branch:** `branofy/seo-vision-v1` (V8 fixes committed in this audit) **Live site audited:** <https://www.eevagga.com> (post V7 deploy)

Executive Summary

Why the score dropped: V8 is a deeper audit than V7. The content agent probed raw HTML (server-rendered output) and found that the 4 most important pages — Homepage, Services, /viewall, and /birthday-planner-bangalore — deliver only ~110–130 SSR words to Googlebot. All body content on these pages is rendered client-side. This was not measured in prior audits. The real-world content quality and crawlability issues have existed since launch; V8 simply surfaced them. Fixing the SSR architecture would bring the score back to 90+.

What Was Fixed in V8 (This Session — Code Changes)

Agent 1 — Technical SEO (Score: 88/100 before fixes → 90/100 after)

PASS — All Core Technical Checks

ISSUE — `/viewAll` (camelCase) Returns 404

Severity: MEDIUM

After removing the `/viewAll` → `/viewall` redirect that was causing a production loop in V7, the camelCase URL now returns a hard 404 instead of redirecting. Since Next.js App Router directories are case-sensitive on Linux (Vercel), and there is no redirect rule, `/viewAll` is not served.

Fix (Branofy): Add Next.js middleware to handle this case-sensitively:

```
`` ts
// middleware.ts
import { NextResponse } from 'next/server'

import type { NextRequest } from 'next/server'

export function middleware(request: NextRequest) {
  if (request.nextUrl.pathname === '/viewAll') {
    return NextResponse.redirect(new URL('/viewall', request.url), 308)
  }
}

export const config = { matcher: ['/viewAll'] }
```

This uses `===` (exact string match), which is case-sensitive — it will NOT match `/viewall`, preventing the loop.

Agent 2 — Sitemap (45 URLs)

Status: PASS

- 45 URLs in sitemap (up from 10 in V6)
- All 9 new service landing pages are in sitemap and return 200
- /viewall is in sitemap and returns 200
- Static pages all return 200

Known Gaps

- 38 of 45 URLs have lastmod: 2026-06-19 (bulk-stamped, not real dates) — Google ignores bulk-stamped lastmod values
- Blog post URLs and package URLs not in sitemap (no blog content published yet)
- /careers not explicitly Disallowed in robots.txt (minor — it has noindex)

Agent 3 — Schema / Structured Data (Score: 80/100 before fixes → 87/100 after)

What Was Fixed

CRITICAL — aggregateRating Values Were Strings on Live

The live site (added by Evaga team's code) had:

```
`json
{
  "aggregateRating": {
    "ratingValue": "4.8",
    "reviewCount": "500"
  }
}
```

Schema.org specifies both as Number . Our V8 fix in layout.jsx adds it correctly:

```
`json`
```

```
"aggregateRating": {  
  "@type": "AggregateRating",  
  "ratingValue": 4.8,  
  "reviewCount": 500,  
  "bestRating": 5,  
  "worstRating": 1  
}
```

```
`
```

HIGH — availability Missing on All 9 Service Pages

AggregateOffer on all 9 service landing pages lacked "availability": "https://schema.org/InStock". This is required for Google's price rich results. Fixed across all 9 pages.

MEDIUM — offerCount Missing on /services

The AggregateOffer on the main services page lacked offerCount. Added "offerCount": 3.

MEDIUM — Telephone E.164 Format

Changed "+91-8050279101" → "+918050279101" (E.164 requires no hyphen after country code).

LOW — ContactPage.about Missing

Added "about": {"@id": "https://www.eevagga.com/#organization"} to the ContactPage schema on /customer-service.

Schema Passes (All Pages)

- All @context use https://schema.org — ✓
- All lowPrice, highPrice, offerCount are JSON numbers (not strings) — ✓

- BreadcrumbList positions sequential on all interior pages – ✓
- All BreadcrumbList item URLs are absolute HTTPS – ✓

- logo ImageObject has width: 512, height: 512 – ✓

- WebSite SearchAction uses correct string target (not deprecated EntryPoint) – ✓

- All sameAs URLs are HTTPS – ✓

- No deprecated schema types – ✓

Remaining Schema Issues

Agent 4 – Content & On-Page SEO (Score: 37/100 average – FAIL)

Root cause: Next.js `BAILOUT_TO_CLIENT_SIDE_RENDERING` markers found on all key pages. The main body content – service descriptions, package cards, hero sections, testimonials – is rendered client-side only. Googlebot sees <130 SSR words on the 4 most important pages.

Critical Architecture Finding: CSR Bailout on All Key Pages

Issue C1 – Orphan Pages: `/viewall` and `/birthday-planner-bangalore` (CRITICAL)

Zero crawlable internal links point to these two pages from anywhere in the site. The "Celebrations" navigation item is a

element with a JavaScript dropdown – not an [tag](#). This means:
[Googlebot cannot discover these pages through internal link crawling](#)
[Link equity from the homepage does not flow to these pages](#)

[/birthday-planner-bangalore](#) is the most commercially important landing page on the site and is [invisible to link-based crawlers](#)

Fix (Evaga Dev Team): Convert the Celebrations dropdown navigation items to [anchor tags](#) (they can still be styled identically). Also add [/viewall](#) and [/birthday-planner-bangalore](#) to the footer [links section](#).

Issue C2 – H1 Tags Hidden on 6 of 7 Pages (CRITICAL)

The [clip:rect CSS pattern](#) ([position:absolute;width:1px;height:1px;overflow:hidden;clip:rect\(0,0,0,0\)](#)) is applied to H1 tags on:

[Homepage](#) ✗

[Services](#) ✗

[Blogs](#) ✗

[/viewall](#) ✗

[Customer Service](#) ✗

[Birthday Planner Bangalore](#) ✗ (no H1 at all)

[About Us](#) ✓ (visible H1 – only PASS)

[Per Google's ORG: content visible to crawlers but hidden from users is a quality concern. Beyond the SEO risk, users see no clear page headline – reducing engagement.](#)

Fix (Evaga Dev + Branofy): Remove the [srOnly](#) style from H1 tags and make them the visually prominent headline for each page. This requires design coordination.

Issue C3 – Blogs Page Returns "No Blogs Found" in SSR (CRITICAL)

[The server-side fetch for blog_posts returns zero results. The Next.js server renders](#)

[No blogs found.](#)

[at build/request time. This means:](#)

[No blog post URLs are discoverable from the listing page](#)

[The /blogs section provides zero topical authority or long-tail content](#)

Fix (Evaga Team):

[Debug why \\${NEXT_PUBLIC_API_BASE_URL}blog/get-all-blog-for-user returns empty during SSR](#)

[Publish blog content once the API is confirmed working](#)

[As a fallback: hard-code a list of 5-10 blog slugs in the sitemap so they can be crawled directly](#)

Issue C4 – Title Tags Over 70 Characters (FIXED in V8)

Issue C5 – Meta Descriptions Over 160 Characters (FIXED in V8)

Issue C6 – Brand Email Inconsistency (LOW)

[The customer service page and mobile footer show \[info@evagaentertainment.com\]\(#\) \(old brand name, single-e\) while all schema, title tags, and canonical URLs use "eevagga" \(double-e\). This creates a trust signal mismatch.](#)

Fix (Evaga Team): Replace all instances of [info@evagaentertainment.com](#) with an [@eevagga.com](#) address.

Page-by-Page On-Page Score

E-E-A-T Assessment

Overall E-E-A-T: 59/100 – WARNING

The legal and contact layer is solid. The main drag: expertise/experience signals (reviews, gallery, portfolio) are CSR-only, invisible to Google.

AI Citation Readiness: 35/100 – POOR

For Google AI Overviews and third-party AI citation:

- Schema JSON-LD is well-formed – quotable facts (address, phone, rating, hours)
- Unique data points visible in SSR: 4.8/5 rating, 500 reviews, CIN, address, phone
- No quotable service descriptions, pricing, or differentiators in SSR HTML
- No blog articles to cite (zero content published)
- About page: the best citation-ready text – "Bangalore's most trusted birthday, house warming and baby shower planning company"
- No FAQ schema generating rich results

Prioritised Action Plan

Priority 1 – Critical (Fix within 2 weeks) – Evaga Dev Team

Priority 2 – High (Fix within 1 month) – Evaga Team

Priority 3 – Medium (Fix within 1 month) – Branofy

Priority 4 – Ongoing – Evaga Team

Scoring

Score projection: If Evaga dev team implements SSR for homepage + services, fixes the nav orphan issue, and publishes blog content: projected score 88-92/100.

Change Log vs V7
